### *Technical description :*

The single components which mainly compose the structure will be in :

massive and/or gluelam Swedish pine wood, which has been pressure impregnated with copper salts and then treated with acrylic based coating and hot galvanized steel.

- The frame structure is entirely made in tubular hot galvanized steel , section 70x30 mm , thickness 3 mm
- the square platforms have the size of 1405 x 1405 mm and are made of 35 mm thick slabs , held by a frame made of 72x72 section elements
- the posts are in gluelam pine wood of 12 cm Ø , with 4 fixing elements at the base of 10x80 . Each post is covered by a protective polyamide green cap , two green rings which are necessary for fixing the panels and a hot halvanized steel fixing plate for connection to the frame
- the panels are technic fabric with hot melt perimetral seams; each panel has eyelets for the fixing to the rings on posts with nylon snap hooks (included)
- the connection part for the sand box is 1,315 mm long, section is 145x45mm
- the structure is made of 4 slabs of section 145x45mm , 1.450 mm long , on which the steel frame , the posts and the platform ar lifetd over.
