Technical description :

Post in gluelam pine wood Ø 12 cm, with 4 fixings 10x80 mm at the base , pressure impregnated with copper salts, then treated with pigmented water-paint with acrylic/alkyd base without chrome, cadmium and chlorine to protect the wood from the degrading action of the UV rays (photolytic action on the lignin, cause of the greying of the wood) . Each post has a polyamide green cap for the fixing of the panels and a galvanized steel plinth for fixing on concrete base (155 mm long).
